AkitaBox

FOR ARCHITECTURE AND ENGINEERING FIRMS

Deliver more for your clients, in less time.

One platform to assess, estimate and report, then hand off data your clients keep using.

AI CAPTURE

Spend less time on site.

Snap a photo and AI reads the nameplate and fills in the details, even without Wi-Fi, so crews capture more.

INSTANT COSTING

Estimate as you assess.

AI driven or custom cost catalogs estimate replacement cost and lifecycle for every asset or project, so findings become plans.

MCP

Ask your client's data anything.

Connect your AI assistant to live AkitaBox data through our MCP server and get answers in plain language.

WHAT YOU GET

Platform

One workspace for every client and building, with accurate floor plans and custom fields you can reuse across engagements.

Capital Management

Turn findings into funded plans: credible estimates, 30-year forecasts and a project list for design and project work.

Report Builder

Client-ready deliverables from a template you set up once, generated in Word with one click.

Data Capture

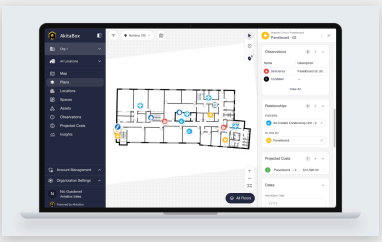

Capture more per visit, with anyone on your team. Keep capturing without Wi-Fi and everything syncs when you reconnect.

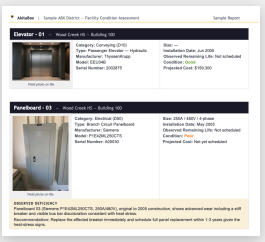

Insights

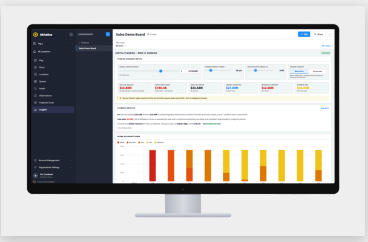

Show clients the story in their data with live dashboards instead of static reports and PDFs.

Open API

Deliver data that fits your clients' systems, with no re-entering data at handoff.

Save time and money on every engagement.

SEE IT IN ACTION

Ask your AkitaBox representative for a walkthrough
